

Mapping & GIS

At GeoVerra, spatial data is core to what we do. Mapping and GIS technologies help us to achieve remarkable things and better understand the world around us, while also improving productivity, communication, collaboration, and safety.

Our industry-leading experts present data to our clients in rich, engaging, and easy-to-understand visual formats, delivering insights that support effective decision-making and drive projects forward on time and on budget.

We use the latest Autodesk® and Esri® software to offer comprehensive mapping and GIS services for clients in diverse industries. Whether you have your own spatial datasets or not, our experienced Cartographic, GIS, and CAD experts can provide a wide range of maps, reports, visualizations, and apps so that you have the insights needed for project success.

Transforming complex data sets into something interactive is what we do at GeoVerra. We collect, comb, filter, and display project information in one place so that our clients can make meaningful data-driven decisions. Whether you need a standardized solution (GV View) or a custom portal, our data visualization programs can help you design and build with confidence.

The Industry's Best Data

- Recent imagery
- Dispositions
- Legal parcels
- Land use
- DLS grid
- Canada Lands Survey (CLS)
- Regulatory Layers (AER, OGC, MER)
- Geology
- Hydrology
- Access
- Elevation/contours
- Wildlife
- Civic boundaries
- Transportation

Standardized Products or Personalized Solutions

- Maps
- Reports
- Visualizations
- Web and mobile apps
- GIS analysis
- Data processing

File Formats

- Images (.jpg, .png, .tiff)
- Geospatial, layered, and attributed PDF
- Commercial plotter for large scale wall maps
- Map books
- Digital 3D models
- KML (Google Earth®)
